Dear Hiring Manager,

I am a second-year Data Science student at Eduvos in Nelson Mandela Bay, and I am applying for an internship or entry-level role in data analysis or business analysis. I enjoy turning data into clear answers, and I am looking for a team where I can contribute from the start while I keep learning.

In April and May 2026 I completed a Data Science and Analytics internship with Future Interns, where I worked on real-world data projects covering analysis, cleaning and visualisation. The programme coordinator’s recommendation letter notes my professionalism, attention to detail and discipline in meeting deadlines. I bring practical skills in Python, SQL, Excel and Power BI, and I have worked with SQL Server and MongoDB.

Outside my studies, I serve on the Student Representative Council, where I was elected to represent all clubs and societies on campus. The role has strengthened my communication and my ability to turn what different groups need into practical plans, such as improving communication and streamlining funding processes. I want to bring the same approach to analysis work, where understanding people matters as much as understanding data.

I also learn by building. My Global House Price Prediction project covers data cleaning, exploratory analysis, outlier removal and feature engineering in Python, and my portfolio at zubenathi-cp.github.io brings my projects, qualifications and CV together in one place.

Thank you for your time and for considering my application. I would welcome the chance to discuss how I can support your team, and I am available for an interview at your convenience.

Yours sincerely,

Zubenathi Mateza
Data Science student, Eduvos Nelson Mandela Bay
